

Novel Enzymes for industrial manufacturing

The Problem

Why?

Chemistry is limited.

Poor selectivity. Too many steps. Harsh conditions. Expensive waste.

How?

Biocatalysis can do better.

The right enzyme can simplify routes, improve yield, and cut process cost.

Problem?

The right Enzyme is rare.

Finding and optimizing them is slow, costly, and uncertain.

The Solution

Enzymes, designed for your conversion

We use our proprietary Algorithm to generate and optimize enzyme variants in days. By simulating an evolutionary process, the resulting designs are perfected before they enter the lab, where we test them for desired KPIs.

Starting-point independent
